

Take the Fear Out of Flying

One in three people have a fear of flying. This text explains the development of aviation, the mechanics of lift and flight, and the noises that an aircraft makes at various stages of the flight, in order to defuse the panic many sufferers experience. Two thirds of the book is dedicated to relaxation exercises, and cognitive behavioural techniques for changing the way sufferers think about flying, and substituting positive for negative beliefs. Included are tables to use and re-use to measure progress.
