

Is The Big Bang Biblical?

Almost everyone has an interest in science. Whether we were simply star-gazing, or conducting laboratory experiments, studying the world around us offers marvelous opportunities to learn. As the natural world unfolds around us, it also prompts philosophical questions: Where did it all come from? Did someone make all this? Geologist and author John Morris, President of the Institute for Creation Research, is often asked a host of questions about how our world came to be. In this book, he answers a hundred of the most common questions, and the variety of topics will excite readers of all ages. In his clear, non-technical style, Morris tackles the following:

- * Has evidence for Noah's flood been found in the Black Sea?
- * Can science prove the Bible?
- * Doesn't carbon dating prove the earth is old?
- * If all animals were created as plant eaters, why do some have sharp teeth?
- * Is there water on the moon?
- * What about stem cell research?
- * And many more!
