

# How to Stop Anxiety and Panic Attacks Quickly and Safely

It is 3am and you are tossing and turning in your bed staring blank at the ceiling wondering the reason for this sudden bout of insomnia. You think about your activities for the day. You realize it was a long one: hot debate at a staff meeting with the boss, looming deadlines and disgruntled clients. You should be exhausted by now, but somehow the sleep does not seem to kick in. At this point your mind wanders to some unconscious thoughts at the back of your head: the overdue mortgage payment, your marital problems, differences with parents and the upcoming appraisal week at work. All these issues have been cause of great concern for you and now you cant help but think about them. You want to close your eyes but thoughts reoccur, preventing you from falling asleep. Stress can cause elevated blood pressure, heart palpitations, and cold sweat, all of which lead to a condition known as anxiety. The trouble with anxiety is that it does not have a specific trigger and can rise out of any situation and, at times, even when there is no situation. You must have also noticed how your spouse or your friends or parents seemed nonchalant about something you were fretting over. The thing with anxiety is that it affects everyone differently so what might be causing you anxiety might not affect your spouse or friends the same way. But think about the police officers, the fire fighters and heart surgeons who have high risk jobs. For them anxiety is a tool, for them a small amount of anxiety is actually necessary to keep them on top of their game and muster courage to do their jobs. T.S. Elliot once said that anxiety is the handmaiden of creativity. Anxiety also helps keep our survival instinct intact and pushes us to perform our best, especially in this overtly competitive age. Thus anxiety is a friend and yet a foe to reckon with. If left unchecked and untreated it can lead to psychological and physiological

conditions, which can be very harmful for the body. Conditions like post-traumatic stress disorder, very common among veterans from Iraq and Afghanistan, fatigue, shortness of breath, nausea, chronic tension and restlessness are some symptoms of anxiety. In this book we will talk about the science of anxiety. What causes it and in what ways does it affect us. We will also talk about panic disorder, which is an end product of a form of anxiety. In the later chapter we will talk about the latest research on ways to reducing anxiety including some of the ways you can use to battle everyday and chronic anxiety. A research conducted by UCLA in 2002 stated that less than 25% of patients with anxiety disorders receive treatment for their conditions. Do not take your stress lightly because a state of balance must exist in the body for you to function at your optimum. Let us begin now with describing the science of anxiety.
