

An Introduction to Toxic and Flammable Vapor Clouds 2nd Edition

An introduction to Toxic and Flammable Vapor Clouds Disclaimer This is a brief handbook to familiarize corporate risk managers, first responders, and the general public on the nature of toxic and flammable vapor clouds resulting from industrial accidents. It provides tables of theoretical adiabatic flashing fractions (TAFF), vapor density, acute toxicity, boiling points and flammability limits for a number of common industrial gases. The author accepts no liability for the use or misuse of this information. Introduction The sudden release (i.e., flash) of a cloud of toxic and/or flammable vapor is a scenario that is frightening and dangerous in the laboratory, at an industrial plant or on a transportation corridor. In this pamphlet, I will describe some of the main factors that determine the potential for flash and outcome of such an event.
