

How Islam Shaped The Modern World

When the question is asked what are Islam's contributions to civilization, often the focus is on scientific development, to the ancient world this is by far the most misleading standard for advancement and development. While Islam was certainly the most advanced civilization of the ancient world its social and moral development is what set it apart from the rest of the world. Social and moral development in the ancient world had a far more significant impact on a society than scientific development, although still important in many ways, this is because ideology changes how the entire community behaved and lived their lives. Moral development drives social development because it defines the framework for how that society should live and spend its time and energy, scientific development historically was a result of both of these because the backdrop in the ancient world for a society that did not develop socially and morally was either living as hunter gatherers or a nomadic life, they either never advanced as a community or degraded after advancement as the moral fabric of that society disappeared, the pyramids could not be built until the Egyptian religion and society demanded it which then directed man's scientific and engineering efforts. As the world at large moved away from this Islam was instrumental in shaping the development of the entire world as it shared its scientific discoveries from one end of the empire to the other, it was a trade empire whose borders stretched from west Africa and southern Europe to China, its scientific advancements which surpassed the rest of the world were a direct result of changing communities and societies around the world and encouraging them to study nature and the world, this global effort would later spread around the world from Europe to Asia to the Americas. By only the 9th century for example muslim

scientists had discovered the world was round and in comparison to Europe, the masses embraced the notion and took it for granted, Ibn Hazm said its proof was that the Sun is always vertical to a particular spot on Earth, meaning if you were to follow the sun to where you perceived it to be setting, you would always find it vertical (up in the sky) to that location even though from your original location it may appear to be setting, that notion dawned on Galileo 500 years later. This book looks at what it is in Islam that encouraged this change in so many communities and it discusses the spirituality that shaped so many lives. Some of these societies were among the most primitive people on earth but in a short period of time they would set up large empires spanning multiple continents, this process was seen numerous times in Islam's history in different regions of the earth by communities of different backgrounds. From the Arab Umayyids who first invaded Europe, to the African Mali Empire whose most famous ruler was the richest person in History, to the Turkish Ottomans who had one of the largest Empires on earth and one of the longest lasting family dynasties, all had simple beginnings but one thing in common that changed their societies in a short period of time, Islam.
